PARTNERSHIP SINCE 2022 (4 Years)	BENEFICIARIES 45 Children	BEDS & MATTRESSES 40 + 40 (2024)	PROGRAMME PILLARS 6 Active Pillars
---	--	---	---

1. EXECUTIVE SUMMARY

This Annual Impact Report for 2025 documents the ongoing multi-sector humanitarian programme delivered by Barn Och Kvinnor Organisation at the Likoni AIDS Orphanage Center, Mombasa County, Kenya. The partnership was established in 2022 and has now entered its fourth consecutive year — a milestone reflecting sustained institutional commitment and deepening programmatic impact across six operational pillars.

The orphanage provides residential care to 45 orphaned and vulnerable children (OVC) — 25 girls and 20 boys — ranging in age from 1 to 18 years. Approximately 40% of residents are living with HIV/AIDS, placing them among the highest-risk groups identified by UNAIDS, UNICEF, and the Kenyan Ministry of Health. All 45 children have lost their parents, the majority to HIV/AIDS-related illness.

Over the programme period, Barn Och Kvinnor Organisation has delivered across six programmatic pillars: (i) **beds and mattresses** — a landmark 2024 intervention that ended children sleeping on bare floors; (ii) **renewable energy access through solar and hand-crank lamp distribution**; (iii) **monthly nutritional support**; (iv) **termly educational materials**; (v) **menstrual hygiene management**; and (vi) **clothing and household hygiene essentials**. The programme aligns with SDGs 1, 2, 3, 4, 5 and 7 and is implemented in accordance with the UN Convention on the Rights of the Child (UNCRC).

Monitoring and Evaluation data confirms measurable and sustained improvements across all six outcome domains. This report presents the full evidence base, a four-year partnership retrospective, outcome data, and forward-looking recommendations for 2026.

2. FOUR-YEAR PARTNERSHIP RETROSPECTIVE (2022–2025)

Barn Och Kvinnor Organisation first engaged with Likoni AIDS Orphanage Center in 2022 following a community needs mapping exercise that identified the facility as one of the most severely under-resourced child welfare institutions in Mombasa County. What began as a single food and materials donation has evolved into a structured, multi-pillar annual programme with recurring monthly and termly commitments.

2022	<p>Programme Inception — First Contact and Needs Assessment</p> <p>Barn Och Kvinnor Organisation conducts its first visit to Likoni AIDS Orphanage Center. A baseline needs assessment identifies critical gaps in nutrition, education, and hygiene. First food donation and school materials distribution conducted. 45 children registered as programme beneficiaries. Monthly food provision commitment established.</p>
2023	<p>Programme Consolidation — Hygiene and Educational Scale-Up</p> <p>MHM programme launched with first Softcare Sanitary Pads distribution. School materials programme formalised on a three-term cycle. Clothing and personal care items added as a programme pillar. Caregiver engagement sessions introduced.</p>
2024	<p>LANDMARK INTERVENTION — Beds, Mattresses & Bedsheets Donation + Dormitory Remediation</p>

	BARN OCH KVINNOR ORGANISATION FOUR YEARS OF PARTNERSHIP IMPACT REPORT LIKONI AIDS ORPHANAGE CENTER, MOMBASA	2022 – 2025
	<p>Project Coordinator Zanet Amalemba conducts a comprehensive dormitory research assessment, uncovering that all children were sleeping on bare floors and that dormitories were severely infested with bed bugs. Barn Och Kvinnor Organisation responds with the donation of 40 beds, 40 POA mattresses, and bedsheets — alongside professional fumigation and spraying of all dormitories. This is the most significant single structural welfare intervention in the four-year partnership.</p>	
2025	<p>Comprehensive Annual Programme — Solar Lamps, Food, Education, MHM, Clothing</p> <p>December 2025: JS-T93 Solar and Hand Crank Lamps distributed, replacing dangerous candles. Full school materials, MHM supplies, and clothing donated. Monthly food delivery maintained for all 12 months. Four-year partnership milestone marked. This Annual Impact Report prepared.</p>	

3. BENEFICIARY PROFILE AND VULNERABILITY CONTEXT

3.1 Demographic Profile

The Likoni AIDS Orphanage Center is home to 45 children who have lost one or both parents, predominantly to HIV/AIDS-related illness. The facility is located in Likoni sub-county — a densely populated coastal urban area characterised by high poverty rates and significant HIV/AIDS prevalence. The center operates with minimal government funding, wholly dependent on civil society support.

Demographic Category	Number	% of Total
Total Children in Residence	45	100%
Girls	25	55.6%
Boys	20	44.4%
Children Living with HIV/AIDS (est.)	~18	~40%
Infants & Pre-school (Ages 1–5)	13	~29%
Primary School Age (Ages 6–13)	22	~49%
Secondary School Age (Ages 14–18)	10	~22%
Children with No Living Parent	45	100%

3.2 HIV/AIDS Vulnerability Context

An estimated 40% of resident children are living with HIV/AIDS — significantly above Kenya's national average of 4.2% (NACC 2023). HIV-positive children face compounded vulnerabilities: compromised immune systems increase susceptibility to opportunistic infections; malnutrition directly undermines ART efficacy; and psychosocial stigma creates barriers to educational and social participation. The programme's multi-sector approach addresses these intersecting vulnerabilities simultaneously.

★ MAJOR INTERVENTION 1 OF 2 ★

4. BEDS, MATTRESSES & DORMITORY REMEDIATION PROGRAMME — 2024

The 2024 Beds and Mattresses Programme represents the single most significant structural welfare intervention in the four-year partnership between Barn Och Kvinnor Organisation and the Likoni AIDS Orphanage Center. Before this intervention, all 45 children — including infants, toddlers, and HIV-positive children — were sleeping on bare concrete and dirt floors, without beds, without mattresses, and without bedsheets. This was not merely a matter of discomfort; it constituted a serious and documented violation of the basic living standards guaranteed to children under Article 27 of the UN Convention on the Rights of the Child.

4.1 Research and Needs Discovery — Zanet Amalemba, Project Coordinator

The intervention was initiated following a comprehensive on-site research visit conducted by Barn Och Kvinnor Organisation's Project Coordinator, Zanet Amalemba. Zanet's role is to conduct structured dormitory and facility assessments — physically inspecting sleeping quarters, interviewing caregivers and older children, and documenting living conditions before any major donation is planned or procured.

Zanet Amalemba, Barn Och Kvinnor Organisation Project Coordinator, on-site at the Likoni facility during her 2024 dormitory assessment and pre-fumigation inspection

During her assessment of the Likoni facility, Zanet documented two critical findings that would define the scope of the intervention:

FINDING 1 — Children Sleeping on Bare Floors

All 45 resident children, including infants as young as 1 year old, were sleeping directly on bare floors with no beds, no mattresses, and no bedding of any kind. The facility possessed metal bed frames but lacked mattresses entirely — rendering the frames unusable and forcing children to sleep beneath, beside, or simply on the ground. Children were observed lying on flattened cardboard, thin pieces of foam, and bare concrete — wholly inadequate sleeping surfaces that exposed them to cold, dampness, and the hard floor surface throughout the night.

FINDING 2 — Severe Bed Bug Infestation Across All Dormitories

Zanet's inspection revealed that all dormitories were severely infested with bed bugs (*Cimex lectularius*) — a pervasive and deeply harmful parasitic insect infestation that had gone unaddressed due to lack of resources. Bed bugs are small, wingless parasitic insects that hide in mattress seams, bed frame crevices, skirting boards, and wall cracks, emerging at night to feed on sleeping humans. Their bites cause intensely itchy, inflamed red welts — frequently leading to skin infections, sleep deprivation, severe psychological distress, and — particularly for immunocompromised HIV-positive children — heightened risk of secondary infections and reduced ART efficacy due to disrupted sleep. Bed bug infestations are notoriously difficult to eradicate without professional chemical treatment and are known to spread rapidly in shared dormitory environments.

4.2 The Intervention — 40 Beds, 40 Mattresses, Bedsheets & Professional Fumigation

Armed with Zanet's documented findings, Barn Och Kvinnor Organisation mobilised a comprehensive, multi-component dormitory welfare intervention. The response was designed not merely to provide beds, but to transform the dormitories from hazardous, infested sleeping spaces into safe, clean, and dignified environments fit for children's rest and recovery.

Component	Quantity / Scope	Purpose
Metal Bunk Bed Frames	40 beds	Elevate children off bare floors; create structured sleeping spaces
POA Mattresses	40 mattresses	Provide safe, clean, adequately cushioned sleeping surfaces
Bedsheets	Full set per bed	Hygiene, warmth, and dignity for each sleeping child
Professional Dormitory Spraying	All dormitories	Eradicate bed bug infestation — chemical treatment of all surfaces,

	BARN OCH KVINNOR ORGANISATION FOUR YEARS OF PARTNERSHIP IMPACT REPORT LIKONI AIDS ORPHANAGE CENTER, MOMBASA	2022 – 2025
		frames, crevices, and wall joints
Post-spray Monitoring	Follow-up visits	Confirm elimination of infestation and zero re-emergence

4.3 Dormitory Spraying — Eradicating the Bed Bug Infestation

Following the procurement and delivery of beds and mattresses, Barn Och Kvinnor Organisation arranged and funded the professional chemical spraying and fumigation of all dormitory spaces at the Likoni facility. This step was non-negotiable: introducing new mattresses into an infested environment without first treating the infestation would have rendered the new sleeping equipment equally contaminated within days.

The spraying process involved the application of certified insecticide compounds to all dormitory surfaces — including floors, walls, skirting boards, bed frame joints, ceiling corners, and any furniture. The treatment was conducted by a professional pest control team, ensuring full coverage of all harbourage sites where bed bugs shelter and breed. Following the spray treatment, dormitories were ventilated, cleaned, and prepared for the installation of the new beds and mattresses. New bedsheets were distributed only after the dormitories had been confirmed clear of active infestation — ensuring children received clean, uncontaminated bedding from the first night of use.

The combined bed, mattress, bedsheet, and fumigation package represents a holistic dormitory rehabilitation — addressing not just the absence of sleeping equipment, but the underlying pest hygiene crisis that had been silently affecting the health and sleep quality of all 45 children.

A child's pure joy — a boy leans against a brand new POA mattress at the Likoni facility, overwhelmed with happiness. For many of these children, this was the first mattress they had ever seen with their name on it — 2024

Children and volunteers raise bedsheets and blankets in celebration — 2024 dormitory welfare intervention

Barn Och Kvinnor Organisation volunteers, facility staff, and all children gathered in front of the Likoni facility with donated POA mattresses visible behind — 2024 Beds & Mattress Programme

4.4 Impact and Outcome Evidence

- 40 beds and 40 POA mattresses installed — all 45 children now sleeping on raised, cushioned surfaces
- Bedsheets distributed with every bed — ensuring hygiene, warmth, and dignity from day one
- Professional dormitory spraying completed — full bed bug infestation eradicated across all dormitory spaces
- Zero re-emergence of infestation reported at subsequent monitoring visits
- Caregiver reports: Children sleeping through the night without disruption for the first time since facility inception
- Health dimension: Elimination of bed bug bites reduces infection risk for HIV-positive children and improves sleep quality essential for ART efficacy
- Dignity dimension: Children described by caregivers as visibly happier and more settled — having a "proper" bed transformed their sense of home and belonging

SIGNIFICANCE — Why This Intervention Matters

The right to adequate sleep, in a safe and clean environment, is not a luxury. It is a fundamental human right enshrined in the UNCRC and a clinical necessity for children living with HIV/AIDS. Before this intervention, 45 children — some as young as one year old — had never experienced a night of sleep on a proper bed. The 2024 Beds and Mattresses Programme did not merely provide furniture; it gave these children something no child should ever be without: a safe place to rest.

★ MAJOR INTERVENTION 2 OF 2 ★

5. RENEWABLE ENERGY ACCESS — SOLAR LAMP DISTRIBUTION — DECEMBER 2025

Prior to the December 2025 intervention, the orphanage lacked reliable electricity. All 45 children depended exclusively on open-flame wax candles as their only light source after dark — a situation with severe documented implications for health, safety, and educational outcomes.

Candle combustion indoors generates fine particulate matter (PM2.5) classified by the WHO as a Category 1 carcinogen risk. For HIV-positive children with already compromised immune systems, chronic indoor smoke exposure dramatically increases susceptibility to acute respiratory infections — the leading cause of under-5 mortality in Kenya. Flickering candlelight causes progressive eye strain reducing reading stamina and comprehension, directly undermining educational outcomes. Unattended candles in dormitories shared by 6–10 children also represented a serious structural fire hazard, with multiple near-miss incidents reported by caregivers before the intervention.

In December 2025, Barn Och Kvinnor Organisation distributed JS-T93 JSOT Solar and Hand Crank LED Lamps. Each lamp provides up to 8 hours of light on a full solar charge, with a manual hand-crank backup ensuring continuous availability regardless of weather. A community orientation session accompanied the distribution.

- 15 JS-T93 Solar/Hand Crank Lamps distributed — covering all dormitories and communal areas
- Zero fire incidents recorded post-distribution vs. multiple near-misses in baseline period
- 100% of children confirmed with safe lighting for evening study at 30-day follow-up
- ~90% reduction in candle usage — candles retained only as emergency backup
- Estimated 5+ year operational lifespan — zero recurring consumable cost

energy access intervention*

6. 2025 PROGRAMME ACTIVITIES — SUPPORTING PILLARS

6.1 Pillar 3: Nutritional Support — Monthly Food Provision

Food insecurity is a persistent critical challenge at the Likoni facility. Prior to the programme, children frequently received only one meal per day. For HIV-positive children, consistent nutrition is a clinical necessity — the WHO's 2021 Consolidated HIV Guidelines confirm that malnutrition directly compromises ART efficacy and accelerates disease progression. Barn Och Kvinnor Organisation maintained twelve consecutive monthly food deliveries throughout 2025.

- 12 consecutive monthly food deliveries completed in 2025 — 100% consistency
- Annual beneficiary contacts: 540 (45 children × 12 months)
- Items: SAMA Fresh Bread, Kudwa UHT Long Life Milk, rice, cooking oil, KissKids baby diapers, supplementary food packages
- Caregiver report: Meal frequency improved from 1 to 2 meals/day on delivery days

Volunteer distributes food packages to children during a monthly food delivery

Softcare sanitary pads and Kudwa Long Life Milk among supplies at the December 2025 distribution — combining nutritional and hygiene support in a single coordinated delivery

6.2 Pillar 4: Educational Support — Termly School Materials

Kenya's Competency-Based Curriculum (CBC) requires consistent access to learning materials. Without exercise books, pens, and stationery, children cannot participate in Continuous Assessment Tests or portfolio-based learning — the core of the CBC framework. Barn Och Kvinnor Organisation distributes school materials to all school-aged children on a termly basis, reaching children both at the orphanage facility and at their enrolled schools. In 2025, three full distributions were completed.

- 3 termly distributions completed in 2025 (Term 1: Jan–Apr; Term 2: May–Aug; Term 3: Sep–Nov)
- ~32 school-aged children (ages 6–18) equipped per term
- Materials: KAZOKU exercise books, PP Notebooks, NATARAJ pens, rulers, coloured notebooks, stationery sets
- Distribution modality: In-school hand-to-child delivery ensuring every enrolled child receives materials personally
- Caregiver report: Children consistently completing homework for the first time since facility inception

The entire school population raises their newly received exercise books and notebooks outside the school grounds — a whole-school distribution day, 2025

Boys in red school uniform hold up brand new NATARAJ pens received alongside their exercise books — 2025

Barn Och Kvinnor Organisation volunteer hands stationery directly to a young child outside the school block

Three children at the orphanage display their KAZOKU exercise books from the termly distribution

6.3 Pillar 5: Menstrual Hygiene Management (MHM)

UNICEF estimates 1 in 10 girls in sub-Saharan Africa misses school during menstruation due to lack of sanitary products. At Likoni, girls were improvising with torn fabric — causing infections, school absences averaging 3–4 days per month per girl, and significant psychosocial distress. Barn Och Kvinnor Organisation provides Softcare Sanitary Pads to all girls of menstruating age, with a bulk supply formally handed over to the facility director for use between programme visits.

- Beneficiaries: ~15 girls aged 10–18
- Product: Softcare Sanitary Pads — Maxi Thick Regular, Cotton Feel
- Outcome: Zero menstruation-related school absences since programme inception
- Psychosocial impact: Significantly reduced distress among adolescent girls — caregiver confirmed

Barn Och Kvinnor Organisation volunteer formally presents a bulk supply of Softcare Sanitary Pads to the Likoni facility director — ensuring sustained MHM supply between programme visits, 2025

6.4 Pillar 6: Clothing, Footwear and Household Hygiene Essentials

Several children had been unable to attend school due to lack of clean, suitable clothing. A further critical finding emerging from programme monitoring visits was that a significant number of children — including school-age children walking to and from school daily — had no footwear whatsoever. Walking barefoot on unpaved roads and dusty compounds exposes children to soil-transmitted infections, cuts, and injuries, with particular risk for HIV-positive children whose immune systems struggle to manage secondary infections.

In 2025, Barn Och Kvinnor Organisation delivered a comprehensive clothing, footwear, and household hygiene package to the facility, including children's clothing bundles across age groups, colourful rubber sandals and clogs for all children, and Omo/Freshness laundry detergent — enabling the facility to maintain cleanliness standards between donation visits.

- Clothing: Children's clothing bundles — mixed ages, sizes, and gender-appropriate items
- Footwear: Rubber sandals and clogs donated to all barefoot children — fitted individually to each child
- Household hygiene: Omo/Freshness laundry powder for facility-level cleanliness maintenance
- Beneficiaries: All 45 resident children
- Impact: School attendance barriers related to clothing and footwear directly addressed
- Health dimension: Footwear eliminates soil-transmitted infection risk — critical for HIV-positive children
- UNCRC alignment: Article 27 — Right to a standard of living adequate for child development

A Barn Och Kvinnor Organisation volunteer kneels to fit sandals on a barefoot child — an individual, dignified shoe fitting conducted for each child during the 2025 footwear donation

A girl proudly holds her new pink "Happy" sandals — her first pair of shoes, received during the 2025 footwear distribution at Likoni

7. MONITORING, EVALUATION AND LEARNING (MEL) FRAMEWORK

7.1 Evaluation Approach

The MEL framework is aligned with OECD-DAC criteria: Relevance, Coherence, Effectiveness, Efficiency, Impact, and Sustainability. A mixed-methods approach combines quantitative distribution records, structured caregiver interviews, beneficiary observation during distribution events, and 30-day and 90-day post-distribution follow-up visits. Baseline data from 2022 enables four-year longitudinal comparison.

THEORY OF CHANGE

IF Barn Och Kvinnor Organisation consistently delivers beds and mattresses, solar lighting, nutritional support, educational materials, MHM supplies, clothing, and footwear to HIV-vulnerable orphaned children at Likoni AIDS Orphanage Center; THEN children will sleep safely without infestation, study by clean light, eat adequately, attend school consistently, walk safely, and live with dignity; LEADING TO improved health outcomes, educational attainment, and long-term resilience — BECAUSE sustained access to basic necessities is the foundational prerequisite for child development guaranteed under the UNCRC and Kenya's Children Act 2022.

7.2 2025 Key Performance Indicators

Indicator	Result
Beds installed and in active use	40 beds — 100% occupied
Mattresses installed and in active use	40 POA mattresses — 100%
Bed bug infestation status post-fumigation	Eradicated — zero re-emergence reported
% children with safe lighting access post-lamp distribution	100% (45/45)
Solar lamps operational at 30-day follow-up	15/15 — 100%
Candle usage reduction	~90% — emergency backup only
Fire incidents recorded post-lamp distribution	0 (zero)
Monthly food deliveries completed in 2025	12/12 — 100%
School-age children receiving termly materials	100% of enrolled children
Termly distributions completed	3/3 — 100%
Girls receiving MHM products	100% of eligible girls
Menstruation-related school absences post-programme	0 — caregiver confirmed
Clothing donation completed	Yes — all 45 children
Footwear (sandals/clogs) donated	Yes — all barefoot children fitted individually
Caregiver satisfaction (overall programme)	High — all monitoring visits

10. CONCLUSION

The four-year partnership between Barn Och Kvinnor Organisation and the Likoni AIDS Orphanage Center stands as compelling evidence of what sustained, faith-driven humanitarian action achieves. In 2024, 45 children who had never slept on a bed in their lives were given beds, mattresses, and bedsheets — and the hidden crisis of bed bug infestation that had silently compromised their health was eradicated through professional dormitory spraying. In 2025, darkness was replaced with safe, sustainable solar light; hunger was addressed through twelve uninterrupted months of food provision; education was enabled through school materials; girls were given dignity through MHM support; and clothing removed barriers to school attendance.

Each of these interventions was made possible because of the rigorous research conducted by the team — particularly Project Coordinator Zanet Amalemba, whose on-the-ground assessment revealed the bed bug crisis and sleeping floor conditions that might otherwise have gone unseen. This is what evidence-based humanitarian programming looks like: not assumptions, but investigation; not guesswork, but documented need; not one-off charity, but a sustained four-year commitment to transformation.

Barn Och Kvinnor Organisation enters 2026 with a deepened commitment to these 45 children — rights-holders deserving the full protection guaranteed by the UN Convention on the Rights of the Child. The motto Stir Hope is not merely a slogan but a lived operational principle: that hope, channelled through concrete action, produces results that transform lives.

"STIR HOPE" — Faith | Action | Result

Barn Och Kvinnor Organisation — four years of partnership, six programmatic pillars, 45 children, one unshakeable commitment: to ensure that no child at Likoni AIDS Orphanage Center is left behind.

11. PHOTO CONSENT AND ETHICAL DISCLOSURE

Barn Och Kvinnor Organisation is committed to the highest standards of child protection, dignity, and ethical communications in all its reporting and advocacy materials. All photographs contained within this Four Years of Partnership Impact Report were taken by authorised Barn Och Kvinnor Organisation volunteers and field staff during official programme visits to the Likoni AIDS Orphanage Center, Mombasa, Kenya.

Prior to any photography, informed consent was obtained from the facility director and caregivers responsible for the children at the Likoni AIDS Orphanage Center. Given the age of the children — the majority of whom are minors — consent was obtained from their designated adult guardians and caregivers in accordance with Kenya's Children Act 2022 and the UN Convention on the Rights of the Child (UNCRC), which require parental or guardian consent for the photographing and public use of images of minors.

All images are published solely for the purpose of transparent impact documentation, donor accountability, and public advocacy for the rights and welfare of the children at the Likoni facility. No image is used for commercial gain. The dignity, identity, and safety of all children depicted have been considered in the selection of photographs included in this report. Images have been selected to reflect the positive impact of the programme and the strength and resilience of the children, rather than to exploit or sensationalise their circumstances.

PHOTO CONSENT STATEMENT

All photographs in this report were taken with the full informed consent of the Likoni AIDS Orphanage Center management and designated caregivers, acting in loco parentis on behalf of the resident children. Consent was obtained verbally and in writing prior to photography. Images are published in accordance with child protection principles and the UN Convention on the Rights of the Child.
